Pipette Decontamination Form

Description of Pipette	Serial Number	Comment

We recommend that filters or filter tips be used to avoid internal contamination. Please remove tip cone filters as part of the cleaning process and ensure that pipettes have been cleaned and decontaminated from dangerous materials, for example chemical, biological, radioactive, bacteriological etc. Copy this page if necessary.

NOTE – We prefer using tips recommended by the manufacturer for calibration. Especially important for small volumes. If you are using another tip, please send at least one for each channel.
